

Diamond Pledge™ NDL Roof Guarantee Wind Addendum

DIAMOND PLEDGE™ NDL ROOF GUARANTEE NO.

MAX. WIND UPLIFT PRESSURE

CORRESPONDING WIND SPEED

WIND ADDENDUM GUARANTEE

GAF also guarantees to you, the original owner of the building described in the above-referenced Diamond Pledge™ NDL Roof Guarantee, that GAF will repair leaks through the GAF Roofing Materials resulting from windstorms causing wind uplift pressure or design velocity pressure up to the levels set forth above. Uplift pressure will be based on current ASCE-7 calculations, using the appropriate table. The basic wind velocity pressure shall be multiplied by a factor of 2 and 3 times, respectively, to determine uplift pressure for perimeters and corners.

WIND GUARANTEE TERM

The wind guarantee lasts for the same period of time as your Diamond Pledge™ NDL Roof Guarantee.

OWNER RESPONSIBILITIES

In the event of a leak through the GAF Roofing Materials caused by a windstorm, you must notify GAF of your claim as detailed in your Diamond Pledge™ NDL Roof Guarantee. You must also include the following documents with the notification of claim: (1) Data from the National Weather Service location nearest to your building listing wind speeds for the period from the start of the guarantee to the date of claim; (2) records of the regular inspections and maintenance carried out on your roofing system; and (3) a report from a licensed professional engineer certifying that the leaks were not caused by failure of the perimeter blocking, deck, or any other building component to withstand the wind uplift pressure or design velocity pressure.

It is your responsibility to ascertain that the perimeter blocking has been designed to withstand the wind uplift pressure and design velocity pressure listed above, that the perimeter blocking was installed in accordance with that design, and to verify that the structural components of your building, including the roof deck, were designed and installed to withstand the structural load caused by the specified wind uplift pressure and design velocity pressure. GAF recommends that you hire a licensed professional to ascertain that the design of the perimeter blocking, roof deck, and structural components was appropriate.

EXCLUSIONS FROM COVERAGE

This wind guarantee addendum does NOT cover leaks resulting from: (1) any failure of the blocking perimeter, the roof deck, or other building components; (2) tornadoes or microbursts; or (3) damage due to windborne debris.

MODIFICATION OF DIAMOND PLEDGE™ NDL ROOF GUARANTEE

All of the terms and conditions of your Diamond Pledge™ NDL Roof Guarantee, including all limitations, remain in full force and effect except as specifically modified by this Wind Addendum. This Addendum must be signed by an authorized representative in order to be effective.
